Annual Energy Reduction =
9,500 ekWh/yr

LED LIGHTING

St. Mary's Memorial Hospital (SMMH) has completed a review and begun replacing existing lighting within the hospital to LED.

The intent is to improve the lighting conditions throughout the hospital for patients, visitors, and staff. Further, with this improvement to quality, there is also a significant improvement the efficiency of the lighting system.

ENERGY & CARBON SAVINGS

The project provides a significant reduction in overall electricity required for the facility through the replacement of all light fixtures within the hospital.

The improvement per lighting fixture is the range of 40-50% decrease in energy usage.
